

Quarterly Business Memo

Q2 2026 • Finance & Operations

Revenue rose 12% year over year, driven by strong renewal rates in the enterprise segment and a rebound in new customer acquisition across North America and Europe. Gross margin held steady at 71%, in line with the plan reviewed at the April board meeting.

Support ticket volume declined 8% following the rollout of the self-serve onboarding flow, and the average first response time improved from six hours to just under four. Customer satisfaction scores rose two points to 92.

Next steps

Next steps: finalize the Q3 hiring plan, expand the partner integration program, and close out the pending vendor security review before the September board meeting.

Conclusion: the team is on track to hit the annual growth target set in January, and the finance group will circulate the full variance report by the first week of July.
